When Seals Cannot Be Applied

FLEX-A-PAK is injectable packing for pumps and valves with easy installation and substantially less leakage than traditional packing. It incorporates a state-of-the-art fiber and lubrication technology that requires no flush water and universal packing where seals can't be applied. The latest chemical and fiber technology is utilized making installation easy by conforming to worn shafts with low coefficient of friction. Self-lubricating, it does not need a flush or cooling water. Since the material is long lasting, it will not dry out or harden. Easy flow fittings and injection guns are cost effective. Quick maintenance re-packs are available. With Flex-A-Pak, there is less packing drag on the shaft. It can be injected or hand packed. We offer styles to meet most industrial conditions. Flex-A-Pak eliminates leakage, lowers operating costs, reduces maintenance time, saves energy, reduces shaft/sleeve wear. Other benefits include extended equipment life, minimized heat generation, and reduced water usage.
